KURIKULUM ITB 2013-2018 – PROGRAM SARJANA
Program Studi Teknik Elektro
Sekolah Teknik Elektro dan Informatika

1 Deskripsi Umum

1.1 Body Of Knowledge

The bachelor's degree in electrical engineering is designed to prepare graduates for responsible engineering positions in design, development, applications, and operation in the fields of communications, control systems, digital signal processing, electromagnetics, digital and analog electronic circuits, biomedical, computer and power systems. The curriculum is built around a strong basic core of mathematics, physics and engineering science.

The body of knowledge in electrical engineering represented in the curriculum is listed in the table below.

Body of Knowledge
EE-DIG Digital Systems
EE-ELE Electronics and Microelectronics
EE-CSG Circuits and Signals
EE-PRF Programming and Problem Solving
EE-ELM Electromagnetic & Optics
EE-POW Power Systems
EE-TLM Telecommunication System
EE-CAO Computer Architecture and Organization
EE-DSP Digital Signal Processing
EE-MES Microprocessor & Embedded Systems
EE-MTE Electrical Engineering Materials
EE-ICS Instrumentation and Control
EE-SYE System Engineering
EE-SPR Social and Professional Issues
EE-HWI Hardware Implementation
EE-MET Modern Engineering Tools

1.2 Tantangan yang Dihadapi

The field of Electrical Engineering has been evolving and expanding that makes its frontiers with other disciplines more obscured. Nowadays, students have been familiar in manipulating “codes” but not “devices”, in the computer’s virtual world rather than the physical world (hardware).

As in any other engineering or science disciplines in Indonesia, most advance technologies related to Electrical Engineering have been developed abroad, which has minimal considerations on national needs of Indonesia. Consequently, the development of Electrical Engineering discipline in Indonesia is mostly driven not by Indonesia’s real needs.

1.3 Akreditasi atau Standar Kurikulum Acuan

Organisasi profesi yang menjadi rujukan adalah IEEE (Institute of Electrical and Electronics Engineers) dan ACM (Association for Computing Machinery) untuk akreditasi nasional BAN PT dan akreditasi internasional ABET- Engineering Accreditation Commission (EAC).

1.4 Referensi

2 Tujuan Pendidikan dan Capaian Lulusan

2.1 Tujuan Pendidikan (PEO: Program Educational Objectives)

The objective of the study program of Electrical Engineering is to produce graduates who possess:

1. Our graduates will have successful careers in their engineering professions.
2. Our graduates are capable to be admitted in and successfully complete their graduate studies.
3. Our graduates will have leadership and an active role in industry, government or education sectors in Asia Pacific region especially Indonesia.

2.2 Capaian (*Outcome*) Lulusan (SO: Student Outcomes)

Kurikulum Program Studi Sarjana Teknik Elektro merupakan kurikulum berbasis outcome bagi mahasiswa (student outcomes). Selama mengikuti Program Studi Sarjana Teknik Elektro, kurikulum ditujukan agar mahasiswa dapat memenuhi student outcomes yang ditetapkan. Seluruh student outcomes ini telah tercakup dalam matakakulia di Program Studi Sarjana Teknik Elektro (lihat bagian 4.2).

Program Studi Sarjana Teknik Elektro mengadopsi student outcomes berdasarkan ABET criterion 3 (General Engineering) sebagai berikut:

- (a) an ability to apply knowledge of mathematics, science, and engineering
- (b) an ability to design and conduct experiments, as well as to analyze and interpret data
- (c) an ability to design a system, component, or process to meet desired needs
- (d) an ability to function on multi-disciplinary teams
- (e) an ability to identify, formulate, and solve engineering problems
- (f) an understanding of professional and ethical responsibility
- (g) an ability to communicate effectively

Bidang Akademik dan Kemahasiswaan ITB	Kur2013Teknik Elektro	Halaman 3 dari 22
Template Dokumen ini adalah milik Direktorat Pendidikan - ITB Dokumen ini adalah milik Program Studi Teknik Elektro - ITB. Dilarang untuk me-reproduksi dokumen ini tanpa diketahui oleh Dirdik-ITB dan EL-ITB.		

- (h) an understanding of the impact of engineering solutions in a global and societal context
- (i) a recognition of the need for, and an ability to engage in life-long learning
- (j) a knowledge of contemporary issues
- (k) an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

Specific Criteria for Electrical Engineering:

- (l) breadth of knowledge over all areas within electrical engineering (eg. electromagnetic, power, electronics, signals and systems, control, biomedical and computer engineering)
- (m) depth of knowledge in at least one area
- (n) knowledge of probability and statistics, including applications to electrical and computer systems
- (o) knowledge of mathematics through differential and integral calculus
- (p) knowledge of basic sciences, computer science, and engineering sciences necessary to analyze and design complex electrical and electronic devices, software, and systems containing hardware and software components
- (q) knowledge of advanced mathematics, linear algebra, complex variables, and discrete mathematics
- (r) background for graduate study

Tabel kaitan capaian lulusan dengan tujuan program studi

Program Educational Objective	Student Outcome
Our graduates will have successful careers in their engineering professions	a,b,c,e,g,h,i,j,k,l,m,n,o,p,q,r
Our graduates are capable to be admitted in and successfully complete their graduate studies.	c,d,f,h,i,j,k,l,m,n,o,p,q,r
Our graduates will have leadership and an active role in industry, government or education sectors in Asia Pacific region especially Indonesia.	c,d,e,f,h,i,j,k,l,m,n,o,p,q,r

3 Struktur Kurikulum

Program Sarjana

3.1 Program Major

Untuk dapat mengikuti Program Studi Sarjana Teknik Elektro dengan baik, mahasiswa perlu memiliki latar belakang kemampuan setara lulusan SMA IPA. Mahasiswa dengan latar belakang pendidikan kejuruan jurusan Teknik Elektro dengan prestasi baik juga dapat diterima.

Secara garis besar, Kurikulum 2013 Program Studi Sarjana Teknik Elektro terbagi atas dua tahap, yakni:

Tahun Pertama Bersama : 2 semester, 36 sks

Tahap Sarjana : 6 semester, 108 sks
 Wajib : 88 sks
 Pilihan bebas: 20 sks (5 sks dari luar; 15 sks dari dalam)

Total : 8 semester, 144 sks
 Wajib : 124 sks
Pilihan bebas: 20 sks (5 sks dari luar; 15 sks dari dalam)

3.2 Program Minor

Program minor Teknik Elektro disediakan untuk mahasiswa program sarjana dari program studi lain. Peserta program diharuskan mengambil dan lulus 7 matakuliah dengan bobot 18 sks seperti tertera pada Tabel 7.

Untuk dapat mengikuti program minor, mahasiswa dari luar Program Sarjana Teknik Elektro harus memenuhi semua persyaratan berikut:

1. lulus semua matakuliah TPB di fakultas/sekolah asal dengan IPK minimal 3.00,
2. memiliki nilai minimal B pada semua matakuliah Fisika Dasar dan Kalkulus di TPB,
3. lulus matakuliah EL1200 Pengantar Analisis Rangkaian dengan nilai minimal B.

4 Roadmap Matakuliah dan Kaitan dengan Capaian Lulusan

4.1 Roadmap Matakuliah

Pada dasarnya, sejumlah matakuliah memiliki pasangan co-requisite matakuliah praktikum, yaitu matakuliah yang diawali dengan nama “Praktikum” (lihat tabel di bawah). Namun demikian, matakuliah praktikum yang sudah lulus tidak perlu diambil kembali, jika matakuliah pasangannya diambil kembali.

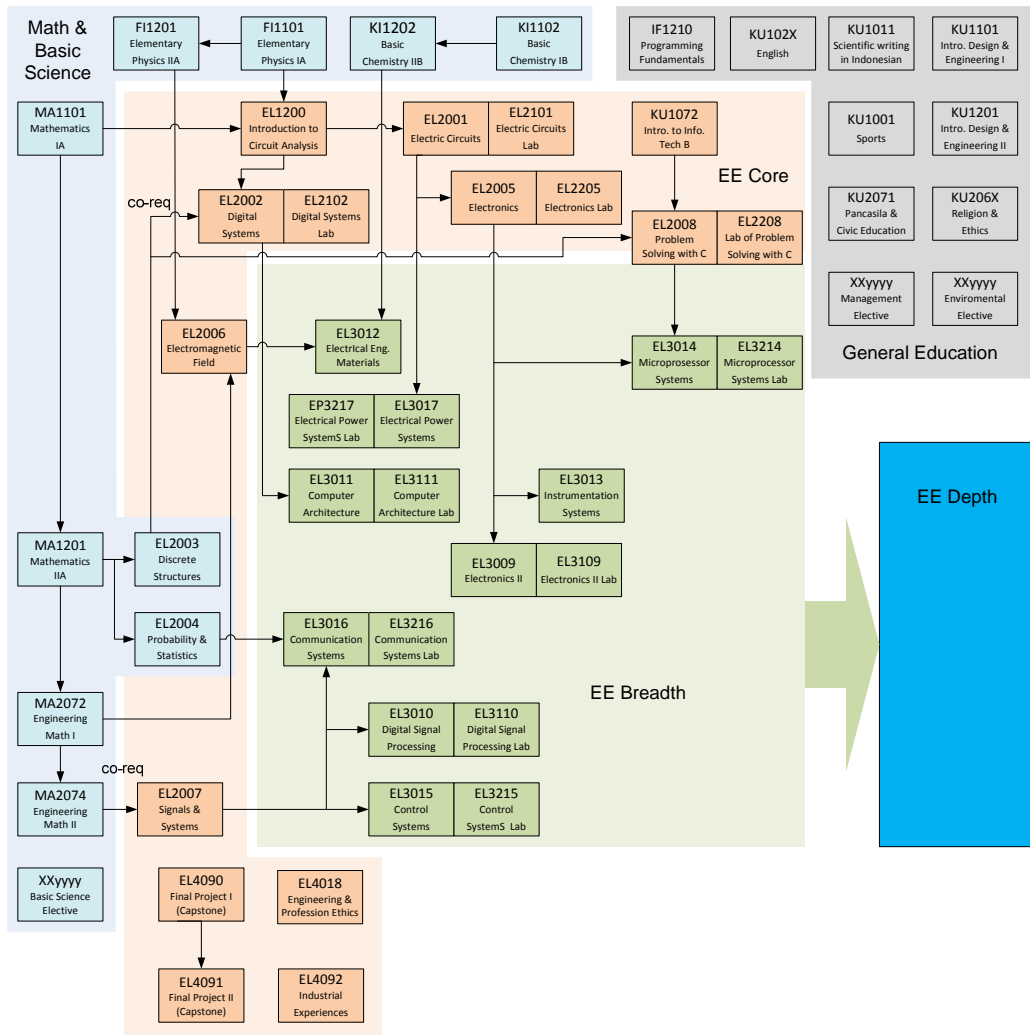

No	Kode	Nama Matakuliah
1	EL2001	Rangkaian Elektrik
	EL2101	Praktikum Rangkaian Elektrik
2	EL2002	Sistem Digital
	EL2102	Praktikum Sistem Digital
3	EL2005	Elektronika
	EL2205	Praktikum Elektronika
4	EL2008	Pemecahan Masalah dengan C
	EL2208	Praktikum Pemecahan Masalah dgn C
5	EL3009	Elektronika II
	EL3109	Praktikum Elektronika II
6	EL3010	Pengolahan Sinyal Digital
	EL3110	Praktikum Pengolahan Sinyal Digital
7	EL3011	Arsitektur Sistem Komputer
	EL3111	Praktikum Arsitektur Sistem Komputer
8	EL3014	Sistem Mikroprosesor
	EL3214	Praktikum Sistem Mikroprosesor
9	EL3015	Sistem Kendali
	EL3215	Praktikum Sistem Kendali

M represents a medium contribution (homework)

L represents a low contribution (in class works or discussions)

5 Atmosfer Akademik

Mahasiswa pada tahun ke-2, pada dasarnya, baru mengalami atmosfer akademik di program studi Teknik Elektro. Oleh karena itu, mereka dimaksudkan untuk mengambil matakuliah tidak lebih dari

Bidang Akademik dan Kemahasiswaan ITB	Kur2013Teknik Elektro	Halaman 15 dari 22

yang ditetapkan di kurikulum per semesternya. Peran dosen wali akademik sangat penting untuk memastikannya.

Kurikulum program studi Teknik Elektro mengandung sejumlah matakuliah yang pelaksanaannya mengacu kepada pradigma *learner centered learning*, yaitu pada semua matakuliah Praktikum, Kerja Praktek, dan Tugas Akhir (*Capstone Design*). Selain itu, sebagai bagian dari pelaksanaan kuliah, matakuliah lain didorong agar mengandung komponen penilaian dari tugas atau proyek dengan tingkat kesulitan yang sesuai, terutama matakuliah bermuatan perancangan sistem.

Semua matakuliah dengan praktikum harus diambil bersamaan, kecuali bagi mahasiswa non Teknik Elektro yang hendak mengambil minor Teknik Elektro, atau jika sumber daya praktikum maupun ruangan menjadi pembatas. Selain itu, sejumlah matakuliah praktikum pada kurikulum semester yang sama, akan memiliki penjadwalan praktikum yang ketat dan tidak diperkenankan bentrok dengan jadwal semua mata kuliah (dalam maupun luar prodi) di semester tersebut. Oleh karena itu, penting menjaga pola pagi-praktikum dan sore-kuliah (atau sebaliknya) yang berselang untuk setiap tahun atau tingkat kurikulum prodi.

Semua matakuliah dengan kelas paralel dimaksudkan pelaksanaannya pada jadwal yang sama dan dikoordinasikan oleh seorang dosen koordinator untuk menjaga kebakuan dan sinkronisasi pada pengajaran materi kuliah maupun pembuatan bahan ujian.

Selain tutorial yang terjadwal waktu dan ruangnya pada sejumlah matakuliah wajib tertentu, sangat diperlukan adanya ruang-bersama (selain perpustakaan) yang cukup besar bagi para mahasiswa Teknik Elektro untuk dapat saling berinteraksi untuk menunjang kegiatan akademik dalam kampus.

Untuk efisiensi penggunaan sumber daya dosen pada kegiatan perkuliahan program studi secara keseluruhan, sebuah matakuliah pilihan dalam program studi hanya ditawarkan pada salah satu semester saja untuk jumlah peserta minimum tertentu.

Mahasiswa hendaknya memiliki kebiasaan membaca terlebih dahulu materi perkuliahan sebelum menghadiri kuliah tatap muka dan membaca kembali materi tersebut setelahnya. Tugas atau pekerjaan rumah adalah sarana latihan bagi mahasiswa untuk lebih memahami materi matakuliah. Matakuliah tanpa praktikum dapat menyertakan tugas atau pekerjaan rumah secara per kelompok yang bersifat praktek atau aplikasi nyata.

6 Asesmen Pembelajaran

6.1 Organization Structure

The organizational structure for the decision making processes for curricular issues, at the program level, is shown in the block diagram in Figure 1.

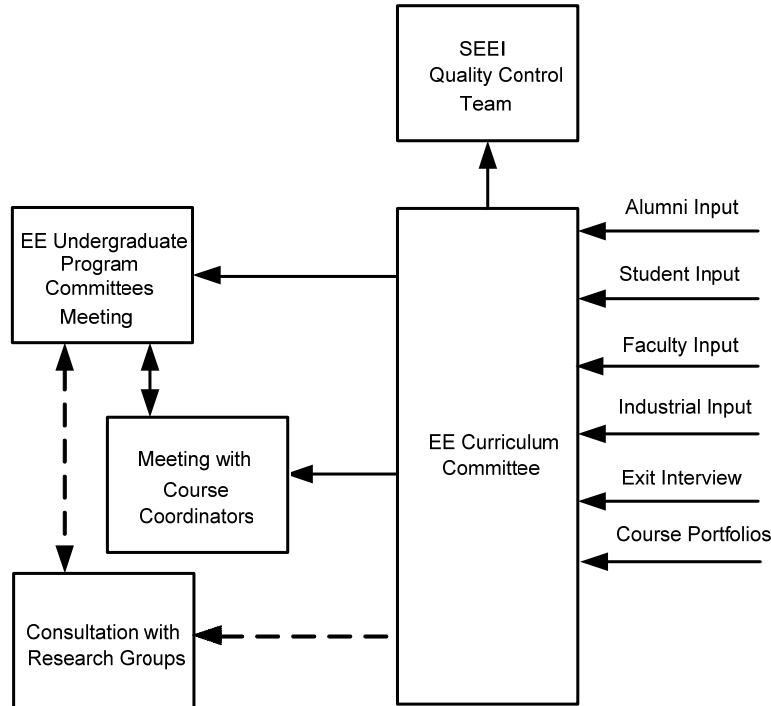

Figure 1 Organization Structure

As presented in Figure 1 above, all the data, comments and recommendations from all the processes are received, analyzed, tabulated and documented by the Curriculum Team. These materials constitute the basis for all curricular and course changes aiming to improve the program. The mechanisms involved in the evaluation of the materials, the decision making and the approval processes for curricular improvements will be discussed in the following sections.

6.2 EE Undergraduate Committees

The EE Undergraduate Committees are coordinated and headed by the current head of EE Undergraduate Program. The Committees are formed to assist some tasks of the head of EE program. The members of the committees are proposed by the head of EE program and formally appointed by SEEI.

There are 4 (four) EE Undergraduate Committees, i.e.

- Curriculum Committee
- Capstone Design Project Committee
- Internships Committe
- Teaching & Laboratory Assistant Committe

The Curriculum Committee has the responsibility to assess the EE program for continuous improvement and to prepare the EE Program for BAN national and ABET international accreditations. The assessment results are brought to the EE Undergraduate Program Committees Meeting for deciding the necessary changes or modification of courses to implement by the Undergraduate EE Program. If it is needed, the meeting's recommendations for changes in the organization, process, and management of the EE Program may be submitted to the Dean of SEEI through the Vice Dean of Academic & Student Affairs of SEEI.

6.3 Meeting with Course Lecturer/Coordinators

Course coordinators are faculty members currently teaching that particular course. If a course is being taught in a multiple sections, a coordinator is selected by the head of the EE program. The head of the program usually conduct meeting with course lecturers and coordinators to ensure that all issues related to course or issues regarding curricula are addressed. One of important data needed for the meeting are course portofolios.

The function of these meetings is also to address issues, in reference to course portofolios, regarding course content implementation, the course objectives and prerequisites. Meetings are usually conducted when an issue arises whether from students or faculty members. The results of these meeting is brought to the EE Program Committees Meeting for deciding the necessary changes or modification of courses to implement by the EE Program.

6.4 Consultation with Head of Research Group

The faculty is organized in research groups based on their expertise and interests. These research groups which relates to the EE program are:

- Biomedical Engineering
- Computer Engineering
- Control & Computer System
- Electronics Engineering
- Informatics
- Electrical Power Engineering
- Telecommunication Engineering

The main function of research groups are to develop and conduct research. This function is strongly related to masters and doctoral education program, and not to the EE undergraduate education. Therefore, the role of the research groups in the EE undergraduate education is mainly to have a consultation with EE Program Committees. The consultation is to make sure that the coordination and continuity between prerequisites and the courses that follow, and hence the material in the broad area, is covered in a coherent way by the different courses especially in the depth area (elective courses). Another area needs to be addressed in this consultation is to discuss faculty assignment for teaching load.

6.5 SEEI Quality Control Team (Gugus Kendali Mutu – GKM)

All result regarding achievement of undergraduate program within SEEI is reported to GKM. GKM will make recommendation of changes at SEEI level after consultation with the undergraduate program heads. GKM also reports to the ITB Quality Control Unit (Satuan Penjamin Mutu – SPM). The main function of GKM is to monitor and evaluate achievement of SEEI key performance indicator, including the achievement of EE Undergraduate Program, which is set by the university, Insitut Teknologi Bandung.

6.6 Information Used for Program Improvement

It has been a university wide practice that the curriculum of any study program in the university is updated every five year for program improvement. EE Program curricular changes is not based solely on faculty input on the state of the art of EE education. The EE Program also measure the program outcome using indirect measurement such as alumni surveys and exit surveys, which are indirect measurements. In addition, the EE Curriculum Committee will perform direct measurements of the program/students outcomes along with the indirect measurements.

Continuous improvement of the EE Program is part of the regular curriculum update activities. Figure 2 shows the cycle of assessment process for the EE Program.

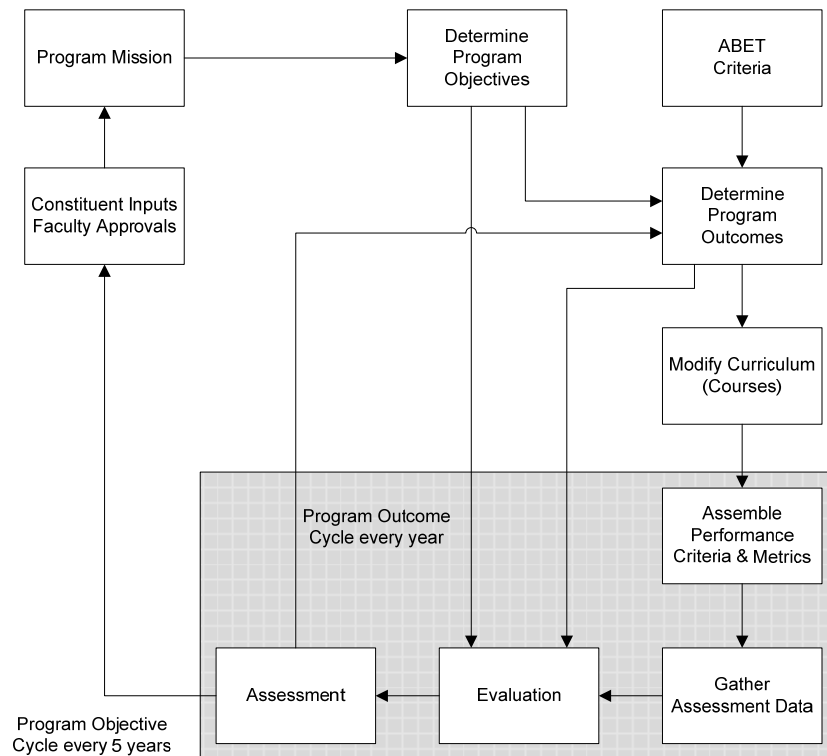

Figure 2 Process of Program Assessment

Referring to Figure 2, the EE **Program Educational Objective** is measured using indirect measurement which consists of alumni survey and exit interviews. Measurement of program educational objectives using alumni survey is conducted every year and exit interview is conducted every graduation (3 times a year). Evaluation and assessment of program educational objectives will be conducted in a 5 year cycle.

Program/Students Outcomes (PO/SO) are measured using course rubrics for the direct measurement and using course surveys for the indirect measurement. Measurement using course survey is being done every semester excluding the short semester (in other words summer semester between Fall and Spring even though we do not have four seasons). Measurement using rubric which requires more effort is only conducted in 3 years. The EE Curriculum Committee proposes a detailed timeline plan to spread of all outcomes measurement so that the measurement may conducted every year because we need the data of the previous academic year for the purpose of gaining some data before ABET accreditation process.

As an effort to measure and improve the program outcomes, the EE Curriculum Committee coordinate a direct measurement of each of the program outcome a set of courses that represents all of the program outcomes. This set of courses are proposed by the EE Curriculum Committee and approved by EE Undergraduate Teams Meeting for the evaluation period of 3 years. The EE Curriculum Committee proposes a detailed timeline plan to spread of all outcomes measurement. Therefore, the outcome measurements may be conducted every semester to collect some data for recommended improvement action at the end of 3 years period. Obviously, the data may be used for accreditation purposes, such as for ABET re-accreditation process.

Table 1 Assesment of Student/Program Outcomes

	Student Outcomes	Assessment
a	An ability to apply knowledge of mathematics, science, and engineering	Rubrics of selected courses contributing to this outcome. Student exit interview
b	An ability to design and conduct experiments, as well as to analyze and interpret data	Rubrics of selected courses contributing to this outcome. Student exit interview
c	An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability	Rubrics of selected courses contributing to this outcome. Student exit interview
d	An ability to function on multi-disciplinary teams	Rubrics of selected courses contributing to this outcome. Student exit interview
e	An ability to identify, formulate, and solve engineering problems	Rubrics of selected courses contributing to this outcome. Student exit interview
f	An understanding of professional and ethical responsibility	Rubrics of selected courses contributing to this outcome. Student exit interview
g	an ability to communicate effectively	Rubrics of selected courses contributing to this outcome. Student exit interview
h	The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context	Rubrics of selected courses contributing to this outcome. Student exit interview
i	A recognition of the need for, and an ability to engage in life-long learning	Rubrics of selected courses contributing to this outcome. Student exit interview
j	A knowledge of contemporary issues	Rubrics of selected courses contributing to this outcome. Student exit interview
k	An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.	Rubrics of selected courses contributing to this outcome. Student exit interview
l	breadth of knowledge over all areas within electrical engineering (electromagnetics, power, electronics, signals and systems, and computer engineering)	Rubrics of selected courses contributing to this outcome. Student exit interview
m	depth of knowledge in at least one area	Rubrics of selected courses contributing to this outcome. Student exit interview
n	knowledge of probability and statistics, including applications to electrical and computer systems	Rubrics of selected courses contributing to this outcome. Student exit interview
o	knowledge of mathematics through differential and integral calculus	Rubrics of selected courses contributing to this outcome. Student exit interview

p	knowledge of basic sciences, computer science, and engineering sciences necessary to analyze and design complex electrical and electronic devices, software, and systems containing hardware and software components	Rubrics of selected courses contributing to this outcome. Student exit interview
q	knowledge of advanced mathematics, linear algebra, complex variables, and discrete mathematics	Rubrics of selected courses contributing to this outcome. Student exit interview
r	background for graduate study	Rubrics of selected courses contributing to this outcome. Student exit interview

Other information is collected from several informal gatherings between students and the Head of EE Program. The Head of EE Program is also occasionally received comments, complaints, and suggestion about EE Program and its academic implementation (lectures, lab works etc) from student or faculty members through e-mails or face-to-face meeting.

6.7 Actions to Improve the Program

The activity taken for major program improvement is implemented every 5 year and minor improvement every year as deemed necessary. The activity comprises several levels of actions as follows.

Firstly, based on the available surveys, the EE Program Objectives may need to be modified, added, or changed by the advisory board and executives of the school together with the head of EE Program. It is noted that the resulting objective should comply with the mission and goal of the school and within those of the university as well. The SEEI Advisory Board will hold a meeting with Head of EE Program and SEEI executives to decide the changes (if any) of the previous EE Program Educational Objective.

A similar process is applied to set up or modify the EE Program Outcomes, but now using the alumni, employer, and student exit surveys. Based on those indirect measurements, revised program outcomes are proposed by the EE Curriculum Committee and the head of EE program. Having set up the new program outcomes, which is in-line with accreditation requirements (e.g. BAN or ABET), the curriculum is designed or modified by the EE Curriculum Committee and the Head of EE Program. The process is always brought to the EE Undergraduate Committees Meeting for formal approval.

Unlike the previous ones, the last level of improvement actions are taken by the Head of EE Program and are implemented every semester based on the course evaluation surveys and any information obtained from students through informal gatherings or e-mails to the head of EE Program. The actions may be in the form of re-appointing more suitable faculty member for particular courses, offering some courses in short semester or in two semesters in each academic year, modifying laboratory procedures and or materials, proposing new or more laboratory or teaching facilities to the school's dean.

The regular improvement effort has been done since the beginning of the academic year 2009/2010. Below is the history of recorded improvement from 2003 to 2008 EE program curricula and from 2008 to 2013 EE program curricula.

The curricular changes in the 2008 EE Program were:

- Eliminate the rigid concentration area requirement where a student can only select one concentration area to become a more flexible where a student can make a plan of study based on more than one concentration area.
- Introduce a breadth and depth approach where a student need to take a five out of nine selection of breadth courses which represents the EE fields and depth courses where a student can gain more in-depth knowledge on a particular concentration area.

- Two new courses (Basic Electric Circuit and Introduction to Information Technology IA) were introduced for all new students in their second semester. The introduction was to equip the students in the school with basic electrical and programming knowledge earlier. Note that not all students in the school will choose to enter EE Program.
- Changes in how we conduct parallel section of a class. At the beginning of the semester, the head of EE Program asks the coordinator to ensure the same standard for all classes.
- Changes in teaching methods by making a course more interesting and hence increasing students learning rate, the usage of multimedia is encouraged and its related equipments are proposed to the school's dean.
- To increase the number of graduates, instead of waiting for one semester for non passing students, the EE Program now offered EE core courses in every semester.
- For several cases, faculty re-appointments have also been implemented based on student's complaints channeled through course evaluation surveys and or e-mails to the head of EE Program.
- Changes also conducted to improve several labs, such as changes in kit and experiment procedures of Electric Circuit and Digital System laboratory activities (EL2093 Electric Circuits and EL2095 Digital Systems courses) were done based on the results of limited students lab surveys.

In line with the SEEI Advisory Board Meeting in December 2012, there is no changes in Program Educational Objective nor the Student/Program Outcomes for the 2013 EE Undergraduate curricula. For the improvement of the 2013 EE Undergraduate Curricula, re-evaluation of the 2008 EE curricula were then done by re-assessment of all learning objectives (LOs) for the EE ITB students. These LOs were derived from the pre-determined Body of Knowledge of the EE Undergraduate Program of ITB. In addition, measurements of program outcomes and evaluation on the Capstone Design (Tugas Akhir) indicates that most EE students do not have necessary skills and knowledge to smoothly complete their Capstone project. This is due to most of the students merely take 5 out of 9 EE breadth courses in their 3rd year in the 2008 EE Curricula.

To address the evaluation and re-assessment results, the curricular changes in the new 2013 EE program are:

- The available breadth courses that represents the EE fields are now compulsory for every EE student in the 3rd year. Furthermore, all breadth courses are not from other undergraduate program but are now offered by EE program itself.
- A new breadth course EL3013 Instrumentation Systems, which has unified contents of previous 4 (four) instrumentation courses (EL3002, EL3012, EL3022, EL3044) in 2008 EE Curricula. This course replaces EL3000 Biomedical Engineering & Lab of 2008 EE Curricula that becomes a depth elective course in 4th year.
- Due to a new offered 1st year course on Basic Programming, which are compulsory for all 1st year SEEI students, the credits of Chemistry courses are now reduced from 6 to 4 credits in total in the 1st year. The 2 credits deficiency for Basic Science is then fulfilled in the 3rd year Basic Science course, which is a compulsory elective.
- Due to changes in its LOs, a new course EL2208 Problem Solving with C, with its Labs, is introduced to replace IF3020 Algorithm & Data Structures (taken from other undergraduate program) in the 2008 EE Curricula.
- Aimed to expose the students with more hands-on experience, there are 4 new Laboratory course (4 credits in total) to cover necessary LOs related to some Core and Breadth Courses, i.e. Labs for Problem Solving with C, Electronics II, Microprocessor System, Communication System, and Power System.
